GitHub Portfolio

Education

Bachelor of Engineering in Electronics and Communication Engineering — **Expected Jul 2027**
S.G. Balekundri Institute of Technology, Belagavi — *CGPA: 7.4/10 (Till 6th Semester)*

Diploma in Electronics and Communication Engineering — **Aug 2021 – Jun 2024**
R.N. Shetty Polytechnic, Belagavi — *CGPA: 9.20/10*

Secondary School (SSLC) — **Mar 2021**
Little Scholar's Academy, Belagavi — *77.6%*

Technical Skills

Programming: C, C++, Python
Embedded: Embedded C, Arduino Uno, NodeMCU (ESP8266), 8051
Tools: Keil, Proteus, MATLAB
Hardware: Digital/Analog Electronics, Sensor Interfacing Basics, PCB Basics, IoT

Relevant Coursework

Digital Electronics • Analog Electronics • Embedded Systems • Microprocessors & Microcontrollers • Computer Networks • Embedded C • IoT Fundamentals

Internships

Embedded Systems & IoT Intern — **Jun 2023 – Aug 2023**
Uilatech, Belagavi

- Developed Arduino and NodeMCU-based embedded applications.
- Integrated sensors for IoT-based monitoring.
- Performed hardware testing, debugging and firmware validation.
- Collaborated with engineers to deliver embedded solutions.

Embedded Systems & IoT in Medical Devices Intern — **Mar 2024 – Jun 2024**
Saburi Scientific, Goa

- Assisted in embedded firmware development for healthcare devices.
- Integrated sensors and IoT modules for medical applications.
- Conducted testing, troubleshooting and documentation.
- Supported hardware integration and validation.

Projects

Smart Seed Preservation System
Components: Arduino, DHT11, Soil Moisture, Relay — GitHub Link

- Built an embedded monitoring system for real-time temperature and humidity.
- Automated environmental control using relay modules.
- Integrated sensors with Arduino to improve storage conditions.

Solar Drying Process for Agriculture and Food Machinery
Domain: Solar Energy, Thermal Storage, Agricultural Food Preservation — GitHub Link

- Contributed to a solar-based agricultural drying project during OJT at Saburi Scientific, Goa.
- Gained practical exposure to solar energy collection, thermal energy storage and forced-air drying.
- Supported system installation, equipment integration and experimental testing, including weight-based moisture-loss monitoring.

Obstacle Avoiding Car
Components: Arduino, HC-SR04, L298N — GitHub Link

- Developed an autonomous obstacle-avoiding robot.
- Implemented ultrasonic sensing and motor control.
- Integrated embedded software with hardware.

Achievements

- First Place in the Project Contest conducted by S.G. Balekundri Institute of Technology, Belagavi, for innovation, technical implementation and teamwork.
